CONTENTS TO VOLUME 52

Computational physics	*Issue*	*Page*
Kronfeld, A.S., K.J.M. Moriarty and G. Schierholz An efficient method for the computation of glueball masses using the inverse of the covariant Dirac operator as correlator	1	1
Epperlein, E.M., G.J. Rickard and A.R. Bell A code for the solution of the Vlasov–Fokker–Planck equation in 1-D or 2-D	1	7
Murtagh, F.D. Hierarchical trees in *N*-body simulations: relations with cluster analysis methods	1	15
Wormeester, H., A.G.B.M. Sasse and A. van Silfhout Deconvolution, differentiation and Fourier Transformation algorithms for noise-containing data based on splines and global approximation	1	19
Nesbet, R.K. Analytical evaluation of integrals over Coulomb wave functions	1	29
Vinette, F. and J. Čížek Perturbation energy expansion using hypervirial theorem and symbolic computation for the *N*-dimensional hydrogen atom in an external spherically symmetric field	1	35
Gausterer, H. and S. Sanielevici Remarks on the numerical solution of Langevin equations on unitary group spaces	1	43
Pollock, E.L. Properties and computation of the Coulomb pair density matrix	1	49
De Angelis, A. A class of *N*-dimensional probability density functions suitable for random generation	1	61
De Grand, Th.A. A conditioning technique for matrix inversion for Wilson fermions	1	161
Varias, A. An extension of the HERA code to flux coordinate equilibria	2	167
Schoen, M. Structure of a simple molecular dynamics FORTRAN program optimized for CRAY vector processing computers	2	175
Damarowsky, M. and G.H. Guthöhrlein Spectral analysis without knowledge of the line shape function by use of a new numerical procedure	2	187
Capotondi, A., V. Sonnad and S. Chin Parallel solution of the shallow water equations using an explicit finite difference algorithm	2	195

Computational physics (continued)	*Issue*	*Page*
Grosdidier, G. Use of an IBM-FPS loosely coupled array of processors for high energy physics programs	2	207
Ohsaki, A., H. Nakamura and S.C. Park On the evaluation of cross section and rate constant of atom–diatom reactions in the sudden and adiabatic approximations	3	291
Turnbull, A.D. and F. Troyon Two variational forms of the MHD ballooning equation	3	303
Zhu, S.-B. and G.W. Robinson Molecular dynamics study of liquid carbon dioxide	3	317
Computer programs in physics		
Topaçli, C., Y. Gündüç and A. Aydinli MULTI: a simulation program for laser processing of multilayer structures	1	65
Castaños, O., J.P. Draayer and Y. Leschber Quantum rotor and its SU(3) realization	1	71
Yannouleas, C. and J.M. Pacheco An algebraic program for the states associated with the U(5) ⊃ O(5) ⊃ O(3) chain of groups	1	85
Pacheco, A.J., D.E. Di Gregorio, J.O. Fernández Niello and M. Elgue Fusion cross sections from measurements of delayed X-rays	1	93
Hubeny, I. A computer program for calculating non-LTE model stellar atmospheres	1	103
Takemasa, T. Abscissae and weights for the Gauss–Laguerre quadrature formula	1	133
Páez, M.J., M.E. Sagen and R.H. Landau LPOTp: nucleon elastic-scattering from spin 0 and 1/2 nuclei in momentum space	1	141
Salvini, S.A. Erratum notice. A new program to calculate differential and total cross sections for electron–atom or ion scattering using the momentum transfer formalism (AANW – CPC 27 (1982) 25)	1	165
Chassapis, C.S., D.G. Papageorgiou and I.E. Lagaris MCL – optimization oriented programming language	2	223
Papageorgiou, D.G., C.S. Chassapis and I.E. Lagaris MERLIN-2.0 – enhanced and programmable version	2	241
Drouffe, J.-M. and K.J.M. Moriarty FORTRAN code for the three-dimensional Ising model on bcc and fcc lattices	2	249
Scott, T.C., R.A. Moore and M.B. Monagan Resolution of many particle electrodynamics by symbolic manipulation	2	261

Computer programs in physics (continued)	*Issue*	*Page*
Cecchini, R. and M. Tarlini Symbolic Lie algebras manipulations using COMMON LISP	2	283
Álvarez Collado, J.R., J. Fernández Rico, R. López, M. Paniagua and G. Ramírez Rotation of real spherical harmonics	3	323
Serzu, M.H. and W.M. Moon Two dimensional fast Fourier transform for large data matrices	3	333
Serzu, M.H. and W.M. Moon Dip-moveout by Fourier transform	3	337
Carbó, R. and B. Calabuig ARIADNE-88: an ab initio monoconfigurational closed and open shell direct electronic energy calculation using elementary Jacobi rotations	3	345
Ping, J.-L., Q.-R. Zheng, B.-Q. Chen and J.-Q. Chen Computer generated subgroup-symmetry adapted irreducible representations and CG coefficients of space groups by the eigenfunction method	3	355
Izrar, B., A. Ghizzo, P. Bertrand, E. Fijalkow and M.R. Feix Integration of Vlasov equation by a fast Fourier Eulerian code	3	375
Le Roy, R.J. Bound → continuum intensities – a computer program for calculating absorption coefficients, emission intensities or (golden rule) predissociation rates	3	383
Sawaryn, A. and W.A. Sokalski Cumulative atomic multipole moments and point charge models describing molecular charge distribution	3	397
Defranceschi, M. and M. Sarrazin Numerical integration over a spherical shell	3	409
Dupuis, M., J.D. Watts, H.O. Villar and G.J.B. Hurst The general atomic and molecular electronic structure system HONDO: version 7.0	3	415
Sciutto, S.J. POLYFIT – a package for polynomial fitting	3	427
Billing, G.D. Erratum notice. Rate constants for vibrational transitions in diatom–diatom collisions (AATY – CPC 44 (1987) 121)	3	443
Fraga, S., M. Klobukowski, J. Muszynska, K.M.S. Saxena, J.A. Sordo, J.D. Climenhaga and P. Clark Erratum notice. Research in atomic structure: a configuration interaction program with relativistic corrections (ABBB – CPC 47 (1987) 159)	3	445
Announcement	3	446
